$$0 = (-I_0) + \frac{C_1}{(1+IRR)^1} + \frac{C_2}{(1+IRR)^2} + \cdots + \frac{C_{10}}{(1+IRR)^{10}}$$

Substituting values:

- $I_0 = 50{,}000{,}000$
- $C_t = 9{,}000{,}000$ per year
- Trial $IRR = 12.5\% \Rightarrow (1+IRR) = 1.125$

$$0 = (-50{,}000{,}000) + \frac{9{,}000{,}000}{(1.125)^1} + \frac{9{,}000{,}000}{(1.125)^2} + \frac{9{,}000{,}000}{(1.125)^3} + \frac{9{,}000{,}000}{(1.125)^4} + \frac{9{,}000{,}000}{(1.125)^5} + \frac{9{,}000{,}000}{(1.125)^6} + \frac{9{,}000{,}000}{(1.125)^7} + \frac{9{,}000{,}000}{(1.125)^8} + \frac{9{,}000{,}000}{(1.125)^9} + \frac{9{,}000{,}000}{(1.125)^{10}}$$

Discount Rate	Irr = 12.5%	Hurdle rate = 10%
IRR	12.5%	10%
Decision	12.5% > 10%	Accept
